DATE MAILED: 06/14/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No.	Applicant(s)	
	10/001,736	VLEESCHOUWER, CHRISTOPHE DE	
	Examiner Dave Czekaj	Art Unit 2621	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) Responsive to communication(s) filed on 17 March 2006.
- 2a) This action is FINAL. 2b) This action is non-final.
- 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) Claim(s) 1-38 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) Claim(s) 37 and 38 is/are allowed.
- 6) Claim(s) 1-9, 11-26 and 28-36 is/are rejected.
- 7) Claim(s) 10 and 27 is/are objected to.
- 8) Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) The specification is objected to by the Examiner.
- 10) The drawing(s) filed on _____ is/are: a) accepted or b) objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
 - a) All b) Some * c) None of:
 1. Certified copies of the priority documents have been received.
 2. Certified copies of the priority documents have been received in Application No. _____.
 3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

1) <input checked="" type="checkbox"/> Notice of References Cited (PTO-892)	4) <input type="checkbox"/> Interview Summary (PTO-413)
2) <input type="checkbox"/> Notice of Draftsperson's Patent Drawing Review (PTO-948)	Paper No(s)/Mail Date. _____.
3) <input type="checkbox"/> Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08) Paper No(s)/Mail Date _____.	5) <input type="checkbox"/> Notice of Informal Patent Application (PTO-152)
	6) <input type="checkbox"/> Other: _____.

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 3/17/06 has been entered.

Response to Arguments

2. Applicant's arguments with respect to claims 1-38 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-4, 6-8, 11-12, 16, 19-22, 24-26, 28-31, 33, and 36 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kim (5777680) in view of Adiletta et al. (6760478), (hereinafter referred to as "Adiletta").

As for claims 1, 2, and 21 Kim teaches of dividing the part of the current frame into blocks (Kim: Column 6, Lines 43-45); performing a first sub-encoding on a first block or set of blocks (Kim: figure 1, column 6, lines 40-49. Note: first sub-encoding

involves the DPCM, MC, and controller); performing a second sub-encoding on the first sub-encoded block or at least one block of the first set of blocks, the second sub-encoding adapting at least one encoding parameter based upon a quantity of the first sub-encoded part of the current frame, the quantity being determined by prediction at least in part from of the frames of the sequence only those frames that are a reference frame (Kim: figure 1, column 6, lines 49-64. Note: second sub-encoding process involves the DCT and Q blocks); and performing the first sub-encoding and the second sub-encoding on another block or set of blocks of the part of the current frame (Kim: figures 1-2. Note: the process is continuous). However, Kim fails to disclose the second sub encoding having a characteristic indicative of an energy content as claimed. Adiletta teaches that prior art solutions are ineffective at providing a real-time two-pass compression algorithm (Adiletta: column 3, lines 1-3). To help alleviate this problem Adiletta discloses a two-pass encoding method which "adapts at least one parameter based upon a characteristic indicative of an energy content, the characteristic being determined by prediction at least in part on only those frames that are a reference frame" (Adiletta: column 13, lines 27-34). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to take the apparatus disclosed by Kim and add the encoding taught by Adiletta in order to obtain an effective real-time compression algorithm.

As for claims 3, 8, and 22, Kim teaches of computing of the quantity identifies the time elapsed between the current frame and the reference frame or frames (Kim: column 4, lines 51-60. Note: the quantization parameter calculated from parameters

obtained from the first encoding step is directly reliant on the picture rate (i.e. frame rate) and therefore this would give the time between frames).

As for claims 4, 26, and 31, Kim teaches of the encoded frames are transmitted over a transmission channel and wherein the adaptive encoding method compensates for channel bandwidth limitations and adapts the second sub-encoding parameters based at least in part upon the quantity (Kim: column 7, lines 24-42. Note: the buffer controls the transmission of the data to the decoder as is well known in the art, the fullness of the buffer is fed to the control which takes it into account when calculating the quantization parameter).

As for claims 6 and 24, Kim teaches of the second sub-encoding is selected from the group comprising: wavelet encoding, quadtree or binary tree coding, DCT coding and matching pursuits coding (Kim: figure 1, column 6, lines 40-64. Note: DCT coding is used).

As for claims 7, 11-12, 16, 19-20, 25, 28-30, 33, and 36, most of the limitations of the claims are contained in the above rejection of claim 1. Kim teaches of dividing the reference frame into blocks and labeling the blocks of the reference frame in accordance with the performance of a first sub-encoding that is applied to the reference frame (Kim: column 7, lines 1-21. Note: after the reference frame goes through the MC the frame is labeled by the control in DPCM block); computing a quantity based on the labeling of the blocks and from the frames of the sequence only those frames that are a reference frame (Kim: Column 4, Lines 30-67 and Column 5, Lines 1-38).

Art Unit: 2621

4. Claims 13-15, 17-18, 32, and 34-35 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kim (US 5,777,680) in view of Adiletta et al. (6760478), (hereinafter referred to as "Adiletta") in further view of Sun (US 5,969,764).

As for claims 15, 18, 32, and 35, most of the limitations of the claims are contained in the above rejection of claims 1 and 7. Kim in view of Adiletta do not explicitly teach of deciding based on the computed quantity to perform or skip encoding the current frame, however, Sun does (Sun: column 8, lines 51-62. Note: as disclosed in Sun, it is well known in the art that skipping a frame or increasing quantization levels are equivalent). Therefore it would have been obvious to one of ordinary skill in the art at the time of the invention to have the option of using the computed quantity or skipping the current frame. By skipping the current frame the coder can allow the transmitted stream to "catch up" to the coder without using any bits or allowing the coarseness to become to larger.

As for claims 13, 17, and 34, most of the limitations of the claims are contained in the above rejection of claim 15. Kim does not explicitly teach of the decision step deciding whether the two step encoding method is to be applied to the current frame or not, however, Sun does (Sun: column 8, lines 51-62. Note: the deciding step being whether or not to skip the frame). Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to have the option of using the computed quantity or skipping the current frame. By skipping the current frame the coder can allow the transmitted stream to "catch up" to the coder without using any bits or allowing the coarseness to become to larger.

As for claim 14, most of the limitations of the claims are contained in the above rejection of claim 13. Kim teaches of the encoded frames are transmitted over a transmission channel and wherein the adaptive encoding method compensates for channel bandwidth limitations and adapts the second sub-encoding parameters based at least in part upon the quantity (Kim: column 7, lines 24-42. Note: the buffer controls the transmission of the data to the decoder as is well known in the art, the fullness of the buffer is fed to the control which takes it into account when calculating the quantization parameter).

5. Claims 5 and 23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kim (5777680) in view of Adiletta et al. (6760478), (hereinafter referred to as "Adiletta") in further view of Lee (6023296).

As for claims 5 and 23, most of the limitations of the claim are contained in the above rejection of claims 1 and 20. Kim does not explicitly teach of performing transformation parameter estimation of a block with respect to the reference frame; thereafter performing transformation compensation on the block; and thereafter determining the error block, however, Lee does (Lee: column 3, lines 39-67, column 4, lines 1-7. Note: the motion estimation is put before the motion compensation in order to improve efficiency of the motion compensator and the subtractor will give the error signal). Therefore it would have been obvious to one of ordinary skill in the art at the time of the invention to add the motion estimator in order to improve the efficiency of the motion compensator.

Art Unit: 2621

6. Claim 9 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kim (5777680) in view of Adiletta et al. (6760478), (hereinafter referred to as "Adiletta") in further view of Krause (5093720).

As for claim 9, most of the limitations of the claim are contained in the above rejection of claim 7. Although Kim does not explicitly teach of comparing the motion vectors to determine the labeling, it is considered well known in the art to do so (See Krause Column 4, Lines 9-22). Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to compare the motion vectors because the motion vectors would already be readily available from the motion estimation processes and therefore would be computationally friendly.

Allowable Subject Matter

7. Claims 37-38 are allowed.

8. Claims 10 and 27 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dave Czekaj whose telephone number is (571) 272-7327. The examiner can normally be reached on Monday - Friday 9 hours.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mehrdad Dastouri can be reached on (571) 272-7418. The fax phone

number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
